Deklaration

Declaration

Based on the manufacturing and quality assurance processes of our supplier, the company produces high-quality gas-powered heat tools that are designed to be safe for international shipping. Our supplier conducts comprehensive testing— including leak-testing and controlled gas-filling — to ensure that all products leave the facility in perfect working condition while fully adhering to safety protocols for transporting pressurized items.
For shipping and safety compliance purposes, please refer to the following information regarding products supplied to us:

Production and Safety:
Our supplier manufactures tools that operate on butane gas and uses ultrasonically welded gas tanks to ensure maximum safety and structural integrity.

Manufacturing Process:
The production workflow includes rigorous quality checks. Each tool undergoes leak testing, gas filling, presetting, resetting, and final setting steps to verify full reliability and performance.

Safety Standards:
All products provided by our supplier comply with international safety standards and are supported by TÜV certification, demonstrating adherence to strict safety requirements.

Shipping Compliance:
As these products are shipped globally, they are prepared to meet all applicable transport regulations for butane-powered tools. Tanks are shipped with no active or hazardous gas levels, ensuring full compliance with international dangerous goods regulations.
